

Bitcos

# What is WEB 3.0?

What is better about 2.0? And what is 1.0?

The next generation of the internet

Decentralization

Based on blockchain

Smart contracts

02

# What is the purpose of WEB 3.0?

Is it necessary at all?

Intellectual property  
protection

Not vulnerable to  
cyber attacks

Transparency

03

# What are the problems of WEB 3.0?

This is temporary

## Complexity

WEB 3.0 uses complex technologies such as blockchain and smart contracts

## Closedness

At the early stage of development

## Ignorance

The technology differs from previous versions of the internet

04

# What are the problems of WEB 3.0 in Russia?

There is no  
domestic  
software

Lack of education

Low awareness

05

# Which of these problems are we solving

WE WILL SOLVE EVERYTHING  
SOON!

Software under the jurisdiction  
of the Russian Federation

Raising awareness

Creating interest in technology

06

# Who are we?

COOL TEAM

**Albert**

Developer; Founder

**Denis**

Strategic marketing

**Sergey**

Engineer

**Svetlana**

Copywriter

**Startup from Russia**

# Зачем нам деньги?

FOR CHOCOLATES

Filling the liquidity pool

Launch of NFT and Video Blockchain Service

Escrow blockchain

Increasing the cost of BWT

08

# What will you get with the investments?

The bwt token can be sent to any user in different parts of the world, where everyone can exchange, sell or use at their discretion for any currency

09

# When will you pay off?

AND AT THE EXPENSE OF  
WHAT?

The need to buy  
cryptocurrencies in rubles

Increasing the liquidity  
of the token

Popularity of our projects

Payment for services in the  
blockchain

Limited Offer

Deflationary

Stacking

In a year it is planned to reach a rate  
of \$ 10 and above

0

# What not to do after buying tokens?

Next year to sell

Sell everything at once
